

TO ALL OUR CUSTOMER

Parma, the 16th May 2017

Ref.: SmartApp and SmartLog presentation

In the past few days, our two new apps have been released on Apple Store (Ios system) and Play Store (Android system).

Technological innovations are always followed by communication updating.

The "Smart Line" machine recording made by the technician who has carried out the installation, enables the dentist to control the device and clarify any doubt or malfunctions with him.

Both applications are free of charge.

Kind regards.

Cattani S.p.A.
Augusto Cattani

SmartApp Through SmartApp the dentist can control the Cattani aspirators of his/her dental practice directly from the smartphone. With SmartApp the dentist can check if the machine is working properly, modify the parameters and arrange an effective maintenance. In addition, SmartApp is the official channel for the mobile communication and updating with the Cattani World, from the technical assistance to the latest news.

SmartLog is the App for technicians installing Cattani Smart Line aspirators. Aspirators with which the dentist can interact from smartphones or tablets through SmartApp can be recorded through this App. It allows the control of the registered aspirators directly from the smartphone as well as the technical reports sent by the dentist through SmartApp.
